

Samples of AVB (Atmospheric Vacuum Breaker)

Sample of AVB Assembly

WHAT IS A BACKFLOW PREVENTION ASSEMBLY?

A backflow prevention assembly is a means or mechanism to prevent backflow. The basic means for preventing backflow is an air gap, which either eliminates a cross-connection or provides a barrier from backflow. The basic mechanism for preventing backflow is a mechanical backflow preventer, which provides a physical barrier to backflow.

TCEQ requires all backflow devices to be the Reduced-Pressure Prevention Assembly.

Reduced Pressure Backflow Prevention Assembly (RP)

Double check valve assembly (DC)

Pressure Vacuum Breaker Assembly (PVB)

Spill-Resistant Pressure Vacuum Breaker Assembly (SVB)
